“When the rubber meets the road...”

Unprecedented Undertaking

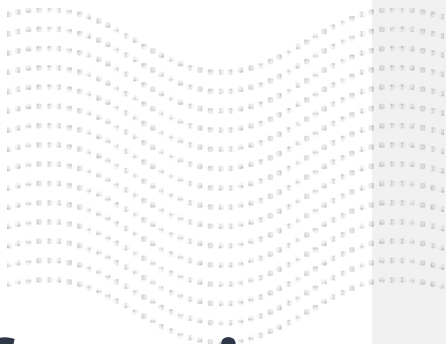

1. LSL Inventories are THE backbone to LCRR, funding and replacement programs.
1. Transformative Data Driven Approach.
1. All 138,165 community water systems must comply. 96.8% of those serve less than 10,000 people.
1. To do this right it will take the utmost interagency collaboration.

Massive Resourcing & Financial Burden for Water Systems

- Majority of systems have NO idea where to even begin.
- On average it takes a system 50 hours to develop preliminary inventories.
- \$300 - \$800 to validate a service line in the field.
- Predictive intelligence WILL help prioritize the work that needs inventory validation but it's not in of itself an inventory.
- Unprecedented communication with homeowners & other stakeholders
- \$4700 - Average Cost of LSLR

Transformative Opportunities

- Data-driven approach to inventory management will provide more comprehensive data about more systems than ever before.
- Standard framework and statewide technical assistance opportunities WILL accelerate deployment of funds, yield cost savings for water systems and ensure rural and disadvantaged communities aren't left behind.
- Interagency collaboration to fund as many inventory programs as possible which should lead to additional funding opportunities for lead service line replacements and additional capital projects.
